The system services described in this chapter operate on the system as a whole rather than on individual objects within the system.They mostly gather information about the performance and operation of the system and set system parameters.

SystemInformationClass
The type of system information to be queried.The permitted values are a subset of the enumeration SYSTEM_INFORMATION_CLASS, described in the following section.

SystemInformation
Points to a caller-allocated buffer or variable that receives the requested system information.

SystemInformationLength
The size in bytes of SystemInformation, which the caller should set according to the given SystemInformationClass.
